Correction

Correction: Mapatumumab, a Fully Human Agonistic Monoclonal Antibody That Targets TRAIL-R1, in Combination with Gemcitabine and Cisplatin: A Phase I Study6744

About the Cover

A recombinant adenovirus genetically designed to replicate in colorectal carcinoma cells was engineered to express the Na/I symporter in target cells only. In vivo, SPECT imaging was used to monitor the propagation of the virus in tumors and to establish the ideal timing for metabolic radiotherapy. For further details, please see the article by Peerlinck and co-workers on page 6595 in this issue.
