Correction

Correction: Article on Genomic and Molecular Profiling to Predict Response to Temozolomide3240

About the Cover

Immunofluorescent detection of EGFR mutation L858R present in the xenograft of NSCLC cell line H3255 using mutation-specific antibodies. Antibody detection of the two most common EGFR mutations in lung cancer has advantages over current DNA sequencing approaches. For further details see the article by Yu and colleagues on page 3023 of this issue.
