CORRECTION

Correction: Effect of Low-Dose Tamoxifen on Steroid Receptor Coactivator 3/Amplicated in Breast Cancer 1 in Normal and Malignant Human Breast Tissue

ABOUT THE COVER

A humanized, monoclonal antibody against PDGFRα was able to inhibit both early colonization of the bone and late progression of skeletal lesions in a murine model of prostate cancer metastasis. The image shows a metastatic tumor produced in the proximal femur by green fluorescent PC3-ML cells, four weeks after being inoculated via the hematogenous route. For further details, please see the article by Russell and colleagues on page 5002 of this issue.
