Highlights of This Issue 5369

SPECIAL FEATURES

5371 Highly Active Antitumor Therapy (HAATT) for Epidermal Growth Factor Receptor–Mutant Lung Cancer
Juliann Chmielecki and William Pao
See article p. 5489

5374 Target of Rapamycin Signaling in Leukemia and Lymphoma
Collin Vu and David A. Fruman

5381 Phase III Clinical Trial Development: A Process of Chutes and Ladders
David M. Dilts, Steven K. Cheng, Joshua S. Crites, Alan B. Sandler, and James H. Doroshow
See article p. 5557

HUMAN CANCER BIOLOGY

5390 Hypoexpression and Epigenetic Regulation of Candidate Tumor Suppressor Gene CADM-2 in Human Prostate Cancer
Guimin Chang, Shuping Xu, Rajiv Dhir, Uma Chandran, Denise S. O’Keefe, Norman M. Greenberg, and Jeffrey R. Gingrich

5402 MSH6 and MUTYH Deficiency Is a Frequent Event in Early-Onset Colorectal Cancer

5414 Differential Gene Expression in Benign Prostate Epithelium of Men with and without Prostate Cancer: Evidence for a Prostate Cancer Field Effect

5424 Dual Inhibition of PI3K and mTORC1/2 Signaling by NVP-BEZ235 as a New Therapeutic Strategy for Acute Myeloid Leukemia
Nicolas Chapuis, Jerome Tumburini, Alexa S. Green, Christine Vignon, Valerie Bardet, Aymeric Neyret, Melanie Pannetier, Lise Willems, Sophie Park, Alexandre Macone, Sauveur-Michel Maira, Norbert Ifrah, François Dreyfus, Olivier Herault, Catherine Laccombe, Patrick Mayeux, and Didier Bouscary

5436 The Insulin-like Growth Factor I Receptor/Insulin Receptor Tyrosine Kinase Inhibitor PQIP Exhibits Enhanced Antitumor Effects in Combination with Chemotherapy Against Colorectal Cancer Models
Sara A. Flanigan, Todd M. Pitts, S. Gail Eckhardt, John J. Tentler, Aik Choon Tan, Andrew Thorburn, and Stephen Leong

5447 Development of a Validated Immunofluorescence Assay for γH2AX as a Pharmacodynamic Marker of Topoisomerase I Inhibitor Activity
Robert J. Kinders, Melinda Hollingshead, Scott Lawrence, Jiuping Ji, Brian Tabb, William M. Bonner, Yves Pommier, Larry Rubinstein, Yvonne A. Evrard, Ralph E. Parchment, Joseph Tomaszewski, and James H. Doroshow; for the National Cancer Institute Phase 0 Clinical Trials Team
A Sense of Urgency: Evaluating the Link between Clinical Trial Development Time and the Accrual Performance of Cancer Therapy Evaluation Program (NCI-CTEP) Sponsored Studies
Steven K. Cheng, Mary S. Dietrich, and David M. Dilts

See commentary p. 5381

REO-10: A Phase I Study of Intravenous Reovirus and Docetaxel in Patients with Advanced Cancer
Charles Comins, James Spicer, Andrew Protheroe, Victoria Routledge, Katie Twigger, Christine M. White, Richard Vile, Alan Melcher, Matt C. Coffey, Karl L. Mettinger, Gerard Nuovo, David E. Cohn, Mitch Phelps, Kevin J. Harrington, and Hardev S. Pandha

Combination of Temsirolimus (CCI-779) with Chemoradiation in Newly Diagnosed Glioblastoma Multiforme (GBM) (NCCTG trial N027D) Is Associated with Increased Infectious Risks

Optimizing the Detection of Lung Cancer Patients Harboring Anaplastic Lymphoma Kinase (ALK) Gene Rearrangements Potentially Suitable for ALK Inhibitor Treatment
D. Ross Camidge, Scott A. Kono, Antonella Flacco, Aik-Choon Tan, Robert C. Doebele, Qing Zhou, Lucio Crino, Wilbur A. Franklin, and Mariel Varella-Garcia

Germline Polymorphisms in Genes Involved in the IGF1 Pathway Predict Efficacy of Cetuximab in Wild-type KRAS mCRC Patients
Thomas Winder, Wu Zhang, Dongyun Yang, Yan Ning, Pierre Bohanes, Armin Gerger, Peter M. Wilson, Alexandra Pohl, David J. Mauro, Christiane Langer, Eric K. Rowinsky, and Heinz-Josef Lenz

ABOUT THE COVER

Atu027, a liposomal siRNA, is a novel RNAi therapeutic for cancer therapy suppressing PKN3 gene expression in endothelial cells of the vasculature. In cultured human endothelial cells (HUVEC), Atu027 mediated downregulation of PKN3 led to increased levels of the adhesion protein vascular endothelial (VE)-cadherin. The different levels of VE-cadherin protein are depicted in this image in a color-coded manner reflecting highest VE-cadherin levels as red colored membrane staining. The authors show that Atu027 treatment modulates the vascular endothelium in a way that metastasis through the blood vessels to the lung is effectively inhibited. For further details, please see Santel and colleagues on page 5469 in this issue.
