## Highlights of This Issue 5603

### SPECIAL FEATURES

#### CCR Translations

**5605** Heading in a New Direction: Drug Permeability in Breast Cancer Brain Metastasis
George W. Sledge, Jr.
See article p. 5664

#### CCR New Strategies

**5608** New Strategies in Peripheral T-Cell Lymphoma: Understanding Tumor Biology and Developing Novel Therapies
Kieron Dunleavy, Richard L. Piekarz, Jasmine Zain, John E. Janik, Wyndham H. Wilson, Owen A. O’Connor, and Susan E. Bates

#### Molecular Pathways

**5618** The Molecular Basis of Lmo2-Induced T-Cell Acute Lymphoblastic Leukemia
David J. Curtis and Matthew P. McCormack

**5624** Targeting Hypoxic Cells through the DNA Damage Response
Monica Olcina, Philip S. Lecane, and Ester M. Hammond

### CANCER THERAPY: PRECLINICAL

**5664** Heterogeneous Blood–Tumor Barrier Permeability Determines Drug Efficacy in Experimental Brain Metastases of Breast Cancer
Paul R. Lockman, Rajendr K. Mittapalli, Kunal S. Taskar, Vinay Rudraraju, Brunilde Gril, Kaci A. Bohn, Chris E. Adkins, Amanda Roberts, Helen R. Thorsheim, Julie A. Caasch, Suyun Huang, Diane Palmieri, Patricia S. Steeg, and Quentin R. Smith
See commentary p. 5605

**5679** Quercetin Induces Tumor-Selective Apoptosis through Downregulation of Mcl-1 and Activation of Bax
Senping Cheng, Ning Gao, Zhou Zhang, Gang Chen, Amit Budhraja, Junji Ke, Young-ok Son, Xin Wang, Jia Luo, and Xianglin Shi

### HUMAN CANCER BIOLOGY

**5630** Benign Mesenchymal Stromal Cells in Human Sarcomas

**5641** Integrative Genomics Analyses Reveal Molecularly Distinct Subgroups of B-Cell Chronic Lymphocytic Leukemia Patients with 13q14 Deletion
Laura Mosca, Sonia Fabris, Marta Lionetti, Katia Todoerti, Luca Agnelli, Fortunato Morabito, Giovanna Cutrera, Adrian Andronache, Serena Matis, Francesco Ferrari, Massimo Gentile, Mauro Spriano, Vincenzo Callea, Gianluca Festini, Stefano Molica, Giorgio Lambertenghi Delliliers, Silvio Bicciato, Manlio Ferrarini, and Antonino Neri

**5654** Foxo3a Suppression of Urothelial Cancer Invasiveness through Twist1, Y-Box–Binding Protein 1, and E-Cadherin Regulation
Masaki Shiota, YooHyun Song, Akira Yokomizo, Keijiro Kiyoshima, Yasuhiro Tada, Hiroshi Uchino, Takeshi Uchiumi, Junichi Inokuchi, Yoshinao Oda, Kentaro Kuroiwa, Katsunori Tatsugami, and Seiji Naito

Correction: Systems-Level Analysis of Neuroblastoma Tumor-Initiating Cells Implicates AURKB as a Novel Drug Target for Neuroblastoma

ABOUT THE COVER

Brain metastases of breast cancer are associated with significant morbidity and mortality. In their study, Lockman and colleagues quantified permeability, and paclitaxel and doxorubicin uptake in over 2000 experimental brain metastatic lesions from two model systems. The representative image shown on the cover is a multimodal image illustrating a single metastatic brain lesion which has 10 fold greater permeability compared to that of normal brain. Despite the increased permeability, drug accumulation only reached cytotoxic levels (>1000 ng/g) in a small subset of metastatic lesions, indicating that new brain-permeable drugs will be required. The picture was obtained by multichannel imaging of the eGFP MDA-MB-231Br lesion (green), indocyanine green within the vasculature (yellow), and 14C-AIB phosphorescence (red). For further details, please see Lockman and coworkers on page 5664 in this issue.
