Highlights of This Issue 5603

SPECIAL FEATURES

CCR Translations

5605  Heading in a New Direction: Drug Permeability in Breast Cancer Brain Metastasis
George W. Sledge, Jr.
See article p. 5664

CCR New Strategies

5608  New Strategies in Peripheral T-Cell Lymphoma: Understanding Tumor Biology and Developing Novel Therapies
Kieron Dunleavy, Richard L. Piekarz, Jasmine Zain, John E. Janik, Wyndham H. Wilson, Owen A. O’Connor, and Susan E. Bates

5654  Foxo3a Suppression of Urothelial Cancer Invasiveness through Twist1, Y-Box–Binding Protein 1, and E-Cadherin Regulation
Masaki Shiota, YooHyun Song, Akira Yokomizo, Keijiro Kiyoshima, Yasuhiro Tada, Hiroshi Uchino, Takeshi Uchiumi, Junichi Inokuchi, Yoshinao Oda, Kentaro Kuroiwa, Katsunori Tatsugami, and Seiji Naito

Molecular Pathways

5618  The Molecular Basis of Lmo2-Induced T-Cell Acute Lymphoblastic Leukemia
David J. Curtis and Matthew P. McCormack

5624  Targeting Hypoxic Cells through the DNA Damage Response
Monica Olcina, Philip S. Lecane, and Ester M. Hammond

CANCER THERAPY: PRECLINICAL

5664  Heterogeneous Blood–Tumor Barrier Permeability Determines Drug Efficacy in Experimental Brain Metastases of Breast Cancer
Paul R. Lockman, Rajendr K. Mittapalli, Kunal S. Taskar, Vinay Rudraraju, Brunilde Gril, Kaci A. Bohn, Chris E. Adkins, Amanda Roberts, Helen R. Thorsheim, Julie A. Gaash, Suyun Huang, Diane Palmieri, Patricia S. Steeg, and Quentin R. Smith
See commentary p. 5605

5679  Quercetin Induces Tumor-Selective Apoptosis through Downregulation of Mcl-1 and Activation of Bax
Senping Cheng, Ning Gao, Zhuo Zhang, Young-ok Son, Xin Wang, Jia Luo, and Xianglin Shi

HUMAN CANCER BIOLOGY

5630  Benign Mesenchymal Stromal Cells in Human Sarcomas

5641  Integrative Genomics Analyses Reveal Molecularly Distinct Subgroups of B-Cell Chronic Lymphocytic Leukemia Patients with 13q14 Deletion
Laura Mosca, Sonia Fabris, Marta Lionetti, Katia Todoerti, Luca Agnelli, Fortunato Morabito, Giovanna Cutriona, Adrian Andronache, Serena Mattis, Francesco Ferrari, Massimo Gentile, Mauro Spirovo, Vincenzo Callea, Gianluca Festini, Stefano Molica, Giorgio Lambertenghi Delliliers, Silvio Biccato, Manlio Ferrari, and Antonino Neri

Correction: Systems-Level Analysis of Neuroblastoma Tumor-Initiating Cells Implicates AURKB as a Novel Drug Target for Neuroblastoma

ABOUT THE COVER

Brain metastases of breast cancer are associated with significant morbidity and mortality. In their study, Lockman and colleagues quantified permeability, and paclitaxel and doxorubicin uptake in over 2000 experimental brain metastatic lesions from two model systems. The representative image shown on the cover is a multimodal image illustrating a single metastatic brain lesion which has 10 fold greater permeability compared to that of normal brain. Despite the increased permeability, drug accumulation only reached cytotoxic levels (>1000 ng/g) in a small subset of metastatic lesions, indicating that new brain-permeable drugs will be required. The picture was obtained by multichannel imaging of the eGFP MDA-MB-231Br lesion (green), indocyanine green within the vasculature (yellow), and $^{14}$C-AIB phosphorescence (red). For further details, please see Lockman and coworkers on page 5664 in this issue.
