PREDICTIVE BIOMARKERS AND PERSONALIZED MEDICINE

Genetic Polymorphisms Associated with a Prolonged Progression-Free Survival in Patients with Metastatic Renal Cell Cancer Treated with Sunitinib
Astrid A.M. van der Veldt, Karel Eechoute, Hans Gelderblom, Jourik Gietema, Henk-Jan Guchelaar, Nielka P. van Erp, Alfons J.M. van den Eertwegh, John B. Haanen, Ron H.J. Mathijssen, and Judith A.M. Wessels

CORRECTIONS

Correction: Bevacizumab plus Fotemustine as First-line Treatment in Metastatic Melanoma Patients: Clinical Activity and Modulation of Angiogenesis and Lymphangiogenesis Factors

Correction: In vitro and Clinical Studies of Gene Therapy with Recombinant Human Adenovirus-p53 Injection for Oral Leukoplakia

ABOUT THE COVER

Rapid restoration of tumor microvasculature and perfusion in esophageal cancer xenografts treated with a vascular disrupting agent. Kyse-30 tumors were analyzed two weeks after administration of one single dose of the immunoconjugate L19mTNFa. Microvessels were stained by anti-CD31 (red), whereas perfusion was evaluated by injection of Dextran-FITC 70 kDa (green). Nuclei were stained by TOPRO-3 (blue). For further details, please see Crescenzi and coworkers on page 447 in this issue.
