ABOUT THE COVER

The recently discovered recurrent ERG rearrangement is highly specific for prostate cancer. There are significant associations of ERG rearrangement in preoperative biopsies with pelvic lymph node metastasis for patients with prostate cancer. The fluorescence in situ hybridization image shows representative nuclei of a prostate cancer gland. One yellow/one green/one red in a nucleus represents abnormal signal patterns indicative of an ERG rearrangement. For details, please see the article by Gao and colleagues on page 4163 of this issue.
