## Highlights of This Issue

**SPECIAL FEATURES**

### CCR Translations

- **4479** Variants on a Theme: A Biomarker of Crizotinib Response in ALK-Positive Non–Small Cell Lung Cancer?
  - Adam S. Crystal and Alice T. Shaw
  - See article p. 4682

- **4482** MicroRNA Dissects Out Dangerous Pancreatic Cysts from All the Rest
  - Ryan M. Thomas and Jason B. Fleming
  - See article p. 4713

### CCR New Strategies

- **4485** New Strategies in Pleural Mesothelioma: BAP1 and NF2 as Novel Targets for Therapeutic Development and Risk Assessment
  - Marc Ladanyi, Marjorie G. Zauderer, Lee M. Krug, Tatsuo Ito, Robert McMillan, Matthew Bott, and Filippo Giancotti

### CCR Perspectives in Drug Approval

- **4491** The European Medicines Agency Review of Eribulin for the Treatment of Patients with Locally Advanced or Metastatic Breast Cancer: Summary of the Scientific Assessment of the Committee for Medicinal Products for Human Use
  - Elias Pean, Sigrid Klaar, Eva Gil Berglund, Tomas Salmonson, Jeanett Borregaard, Lee M. Krug, Tatsuo Ito, Robert McMillan, Matthew Bott, and Filippo Giancotti

### HUMAN CANCER BIOLOGY

- **4549** Survival Signals and Targets for Therapy in Breast Implant–Associated ALK−/C0 Anaplastic Large Cell Lymphoma
  - Melissa G. Lechner, Carolina Megiel, Connor H. Church, Trevor E. Angell, Sarah M. Russell, Rikki B. Sevell, Julie K. Jang, Garry S. Brody, and Alan L. Epstein

### Statistics in Clinical Cancer Research

- **4498** Worth Adapting? Revisiting the Usefulness of Outcome-Adaptive Randomization
  - J. Jack Lee, Nan Chen, and Guosheng Yin

### Molecular Pathways

- **4508** Molecular Pathways: Targeting Hsp90—Who Benefits and Who Does Not
  - Maurizio Scaltriti, Shaheenah Dawood, and Javier Cortes

### Reviews

- **4522** Optimizing Cancer Treatments to Induce an Acute Immune Response: Radiation Abscopal Effects, PAMPs, and DAMPs
  - Charles M. Ludgate

- **4526** Vascular Endothelial Growth Factor Pathway Polymorphisms as Prognostic and Pharmacogenetic Factors in Cancer: A Systematic Review and Meta-analysis
  - Lawson Eng, Abul Kalam Azad, Steven Habbous, Vincent Pang, Wei Xu, Anke H. Mailrand-van der Zee, Servap Savas, Helen J. Mackay, Eitan Amir, and Geoffrey Liu

- **4538** Promising Personalized Therapeutic Options for Diffuse Large B-cell Lymphoma Subtypes with Oncogene Addictions
  - James J. Steinhardt and Ronald B. Gartenhaus

**ABOUT THE COVER**

Wright–Giemsa-stained cytopsin of early passages of TLBR-2 cells in culture. This cell line derived from an aggressive breast implant–associated T-cell CD30+ ALK+ anaplastic large cell lymphoma (ALCL) shows typical morphologic features, including enlarged nuclei with frequent mitotic figures, multiple prominent nucleoli, pale cytoplasm with vesiculation, and occasional multinucleated giant cells (original magnification, ×400). Along with TLBR-1 and -3, it represents a new model for breast implant–associated ALCL and is characterized by a near triploid karyotype, specific chemotherapy drug sensitivities, and high expression of several pathway signals including Notch1, survivin, antiapoptotic genes, IL-6 and IL-2 autocrine cytokines, and STAT3, which seem to be associated with the oncogenesis and growth for these unique cancers. For details, see the article by Lechner and colleagues on page 4549 of this issue.
