### Highlights of This Issue 2275

#### SPECIAL FEATURES

**CCR Translations**
- PRAMEing a Picture of Differentiation Therapy for AML?  
  Robert L. Redner  
  See article, p. 2562
- Classifying MMR Variants: Time for Revised Nomenclature in Lynch Syndrome  
  Y. Nancy You and Eduardo Vilar  
  See article, p. 2432

**CCR New Strategies**
- New Strategies in Diagnosing Cancer in Thyroid Nodules: Impact of Molecular Markers  
  Yuri E. Nikiforov, Linwah Yip, and Marina N. Nikiforova

**CCR Perspectives in Drug Approval**
- U.S. Food and Drug Administration Approval: Vismodegib for Recurrent, Locally Advanced, or Metastatic Basal Cell Carcinoma  
  Michael Axelson, Ke Liu, Xiaoping Jiang, Kun He, Jian Wang, Hong Zhao, Dubravka Kufirin, Todd Palmby, Zedong Dong, Anne Marie Russell, Sarah Miksinski, Patricia Keegan, and Richard Pazdur

### HUMAN CANCER BIOLOGY

**NIK Controls Classical and Alternative NF-κB Activation and Is Necessary for the Survival of Human T-cell Lymphoma Cells**
Lina Odqvist, Margarita Sánchez-Beato, Santiago Montes-Moreno, Esperanza Martín-Sánchez, Raquel Pajares, Lydia Sánchez-Verde, Pablo L. Ortiz-Romero, Jose Rodriguez, Socorro M. Rodríguez-Piñilla, Francisca Iniesta-Martínez, Juan Carlos Solera-Arroyo, Rafael Ramos-Asensio, Teresa Flores, Javier Menarguez Palanca, Federico García Bragado, Purificación Domínguez Franjo, and Miguel A. Piris

**High Phospho-Stathmin(Serine38) Expression Identifies Aggressive Endometrial Cancer and Suggests an Association with PI3K Inhibition**
Elisabeth Wik, Even Birkeland, Jone Trovik, Henrica M.J. Werner, Erling A. Holvik, Siv Mjøs, Camilla Krakstad, Kathinka Kusonmann, Karen Mauand, Ingunn M. Steen, Frederik Holst, Kjell Petersen, Anne M. Oyan, Ronald Simon, Karl H. Kalland, William Ricketts, Lars A. Akslen, and Helga B. Salvesen

**PI3K/AKT Signaling Is Essential for Communication between Tissue-Infiltrating Mast Cells, Macrophages, and Epithelial Cells in Colitis-Induced Cancer**

### Molecular Pathways

**Molecular Pathways: Radiation-Induced Cognitive Impairment**
Dana Greene-Schloesser, Elizabeth Moore, and Mike E. Robbins

**Molecular Pathways: Mitogen-Activated Protein Kinase Pathway Mutations and Drug Resistance**
Antonia L. Pritchard and Nicholas K. Hayward

### Review

**Targeting the HGF/c-MET Pathway in Hepatocellular Carcinoma**
Lipika Goyal, Mandal D. Muzumdar, and Andrew X. Zhu

ABOUT THE COVER

Assembling of microRNA-loaded transferrin-conjugated-nanoparticles to target acute myeloid leukemia (AML) blasts. The nanoparticle core was composed of negatively charged microRNA molecules (miR, \(\text{MiR}^{-}\)) and positively charged polyethylenimine (PEI, \(\text{PEI}^{+}\)). Empty nanoparticles were composed of DOPE (\(\text{DOPE}\)), linoleic acid (\(\text{Lin}\)), and DMG-PEG (\(\text{PEG}\)). After the loading of the PEI-miR core in the nanoparticles, transferrin-PEG-DSPE (\(\text{PEG}\)) was inserted into the nanoparticle surface for specific targeting of leukemia blasts. The background depicts a cytospin of AML blasts derived from a mouse with AML treated with miR-loaded nanoparticles. For details, see the article by Huang and colleagues on page 2355 of this issue.
