ABOUT THE COVER

The cover shows $\text{INF}\gamma$ production by activated T cells in a section of biopsied tumor tissue. Tissue sections were probed for $\text{INF}\gamma$ expression (brown foci) using RNAscope and costained for CD3 expression (red foci) using immunohistochemistry. Representative images are from a clear cell sarcoma tumor treated with two injections of 6-million aDCs/injection. For details, see the article by Subbiah and colleagues on page 3845 of this issue.
