Supplementary Fig. 7. HHIP protein is expressed in all tumor cells and its levels are increased by HhAntag. Immunohistochemistry analysis of HHIP expression was performed on xenograft tumors of control and HhAntag treated mice. H score was determined based as frequency* intensity (frequency score 1=1-10% cells, 2=11-50% cells, 3=51-100% cells and intensity score 1=low; 2=high). Bar represents 50 μm.
