Supplementary Figure 3.

Relationship between IHC scores and EGFR and HER2 messenger RNA (mRNA) levels. EGFR and HER2 mRNA levels were measurable in 97% and 98% of all samples, respectively. (A) Median EGFR mRNA levels: score 0, 1.0 (n = 198); 1+, 1.1 (n = 358); 2+, 1.3 (n = 176); and 3+, 1.9 (n = 73); P < 0.001, Kruskal-Wallis test. (B) Median HER2 mRNA levels: score 0, 0.04 (n = 429); 1+, 0.05 (n = 206); 2+, 0.07 (n = 100); and 3+, 0.63 (n = 74); P < 0.001, Kruskal-Wallis test.
