Supplementary Figures

Supplementary Fig. S1: Three components principal component analysis of (a) tissue and (b) serum samples. Breast cancer tumour tissues (a) and serum from breast cancer patients (b) are indicated in red (■). Adjacent normal tissues (a) and serum from healthy individuals (b) are indicated in blue (■).

Supplementary Fig. S2: Correlation plots from inter-platform comparison studies. (a) same breast cancer tumour sample extracted by mirVana and miRNeasy; (b) same breast cancer tumour sample ran on microarray and RT-PCR panels.
