Supplemental Fig. 4

A

5.8% of all cases up-regulated in Glioblastoma

B

14.3% of all cases down-regulated in proneural cluster
Supplemental Figure 4: A, Survival curve from a query of the Cancer Genome Atlas (TCGA) showed the glioblastoma samples with increased expression (EXP>2) of S100A4 (red line, 9.9%) have a shorter overall survival (P=0.000562). B, 14.3% proneural glioblastoma samples have down-regulation of S100A4 (red line) and longer survival (P=0.009221).
