Inhibition of prostate cancer osteoblastic progression with VEGF_{121}/rGel, a single agent targeting osteoblasts, osteoclasts, and tumor neovasculature

Khalid A. Mohamedali, Zhi Gang Li, Michael W. Starbuck, Xinhai Wan, Jun Yang, Sehoon Kim, Wendy Zhang, Michael G. Rosenblum and Nora M. Navone

Supplemental Figure 1
Neonatal mouse calvaria untreated or treated with VEGF_{121}/rGel. Methods are as described in the text. VEGF_{121}/rGel alone did not have a significant effect on new bone formation.
