Article on Sex-Specific Survival Advantage with Parathyroid Hormone—Related Protein4130

About the Cover

The $\alpha\beta3$ integrin is a key player in angiogenesis and tumor metastasis. The cover image shows an immunohistochemical stain of $\alpha\beta3$ expression on the endothelium of a microvessel in a pigmented villonodular synovitis. In the same lesion, $\alpha\beta3$ expression could also be demonstrated noninvasively by positron emission tomography (PET) using the $\alpha\beta3$ selective tracer [^{18}F]Galacto-RGD. The authors demonstrate that [^{18}F]Galacto-RGD PET successfully identifies the level of $\alpha\beta3$ expression in man noninvasively. For further details, please see Beer *et al.* on page 3942.
