About the Cover

FISH analysis of 9p21 locus in HPV16-positive oropharyngeal squamous cell carcinoma. The cytogenetic analysis was performed using a CEP9/9p21 probe to interphase nuclei. The nuclei showed a normal disomic hybridization pattern of 9p21 represented by two centromere 9 signals (green spots) coupled with two 9p21 signals (red spots). For further details, please see Perrone et al. on page 6643 in this issue.

Clinical Cancer Research will no longer print author and subject indexes for each yearly volume. The majority of our readers report that they now use online search capabilities to find articles (http://clincancerres.aacrjournals.org).
