HDAC Inhibitors and Cardiac Safety. Rhoda Molife, Peter Fong, Michelle Scurr, Ian Judson, Stan Kaye, and Johann de Bono **1068**

In Response: Manisha H. Shah, Miguel A. Villalona-Calero, Guido Marcucci, John C. Byrd, and Michael R. Grever **1068**

About the Cover

The *TP53* tumor suppressor gene is located at 17p13.1. 17p13 allelic losses are very frequent in adrenocortical cancer, and somatic mutations of *TP53* are observed in a third of these neoplasms. In malignant adrenocortical tumors, somatic *TP53* mutations are associated with p53 accumulation, as determined by immunohistochemistry. The larger figure shows a nuclear staining for p53 in an adrenocortical cancer with a *TP53* mutation. By contrast, the smaller figure shows that staining for p53 is not significant in a tumor without *TP53* mutation (<1% of cells). For further details, please see Libè *et al.* on page 844 of this issue.
