About the Cover

U87MG glioma cells expressing the de2-7 EGFR (or EGFRvIII) were transiently transfected with the lysosomal marker lgp-120 tagged with GFP (*green staining*). After transfection, cells were incubated with mAb 806-cy3 at 4°C (*red staining*), before induction of internalization by incubating at 37°C for 0 (*top left*), 30 (*top right*), 60 (*bottom left*) and 120 (*bottom right*) minutes. Colocalization of mAb 806-Cy3 and lgp-120-GFP in the lysosomes can be clearly observed at 60 and 120 minutes (*yellow staining*). For further details, please see Johns *et al.* on page 1911 in this issue.
