Correction

Correction: Article on Pegylated Liposomal CKD-602.....	2949
--	-------------

About the Cover

Overexpression and constitutive nuclear localization of cohesin protease Separase in human cancers. Immunofluorescence localization of Separase (*red*) to nucleus in a breast ductal carcinoma sample [nuclei are stained with DAPI (*blue*)] is shown here. Strong positive correlation of Separase mRNA expression with tumor grade and a strong negative correlation with disease-free and overall survival were also noted in breast and prostate carcinomas. For further details, please see Meyer and co-workers on page 2703 of this issue.
