## ABOUT THE COVER

Codetection of microRNA and protein markers in formalin-fixed paraffin-embedded clinical specimens. Cover image depicts expression of microRNAs and proteins in normal prostate tissue. Diffuse and apical cytoplasmic staining of cytokeratins 8 and 18 (red) as well as membranous staining of E-cadherin (blue) highlights prostatic epithelium. Cytoplasmic-enriched staining of miR-141 (green) is confined to epithelial cells, whereas that of let-7a (orange) is detected in both epithelial and stromal compartments. For further details, please see the article by Sempere and colleagues on page 4246 of this issue.
