## ABOUT THE COVER

The image displays a section of a human medulloblastoma sample that has been stained with antibodies against the transcription factor FoxM1 (green) and the proliferation marker Ki67 (red). Tumor cell nuclei are visualized by DAPI. Expression of FoxM1 is not restricted to proliferating cells, as revealed by nuclei that are labeled green but lack red staining. For details, see the article by Priller and colleagues on page 6791 of this issue.
