ABOUT THE COVER

Rapid restoration of tumor microvasculature and perfusion in esophageal cancer xenografts treated with a vascular disrupting agent. Kyse-30 tumors were analyzed two weeks after administration of one single dose of the immunoconjugate L19mTNFa. Microvessels were stained by anti-CD31 (red), whereas perfusion was evaluated by injection of Dextran-FITC 70 kDa (green). Nuclei were stained by TOPRO-3 (blue). For further details, please see Crescenzi and coworkers on page 447 in this issue.
