ABOUT THE COVER
Integrative analysis of clear cell renal cell carcinoma shows predominant hypermethylation. A circos plot shows alterations in DNA methylation (hypermethylation in blue, outer ring), copy number variations (amplifications in red and deletions in green, middle ring), and expression (underexpressed in green, overexpressed in orange, innermost ring) in renal cell carcinoma when compared. For details, see the article by Hu and colleagues on page 4349 of this issue.
