## ABOUT THE COVER

The cover shows a micrograph of the intracranial subventricular zone of an 11-day-old mouse that was injected 10 days prior with DNA encoding NRAS and SV40-LgT to generate glioblastoma. Cells expressing the chemokine CXCL12 are shown in magenta. Some of these cells have taken up the DNA, as evidenced by expression of SV40-LgT (green). For details see the article by Calinescu and colleagues on page 1250 of this issue.
